

MANAGEMENT SYSTEM FOR SUSTAINABLE PALM OIL PRODUCTION

- The Musim Mas system for sustainable production of palm oil is built on the RSPO Principles and Criteria; the major components are **drivers**, **enablers**, **processes** and **results**.
- Principle 3 on long term economic viability and Principle 8 on the need for continuous improvement in all key areas of our operations are the key **drivers** of the management system.
- The **enablers** are Plan-Do-Check-Act (PDCA) approaches such as the ISO 14000 environment management system and Green Productivity (GP). In Musim Mas we have adopted the GP methodology to achieve continuous improvement.
- Major **processes** in the production of palm oil can managed according to the RSPO principles 2, 4, 5, 6 and 7.
- The performance or **results** of the company would be gauged against a scorecard consisting of level of legal compliance, economic or financial results, environmental performance and social performance.
