Verification Outcomes

RMF: All 569 supplying mills included in the scope have been subjected to Musim Mas Risk Management Framework. Musim Mas also has provided evidence of the implementation of the framework. Based on the 2025 supply chain, Musim Mas has identified 0 high risk mill, 31 medium risk mills and 538 low risk mills. Below is the list of Musim Mas facilities that have been supplied by among the assessed mills. Proper execution of the procedure and risk classification has been verified.

VDF: In 2025, Musim Mas has achieved 99.58% Deforestation-Free Volume (VDF) based on the percentage volume of FFB for the facilities included in the scope.

Verification methodology RMF:

- A sample equal to the square root of the total number of mills supplying to the facilities in the scope of verification was taken based on a risk-based approach including the following variables: volumes delivered as per TTM.
- Reported traceability figures by Musim Mas for all the facilities included in this scope were reviewed by cross checking information for the mills selected for the sample and with the collection of Traceability to Plantation (TTP) data of its FFB supply base.
- The collected TTP data to overlay the FFB supply sheds with conservation areas and peat layers based on approach Village Based Risk Traceability, Augmented Village Based Risk Traceability and Fixed Radius.

Verification methodology VDF:

- Reported VDF figures by Musim Mas for all the facilities included in this scope were reviewed by cross checking the risks identified through Musim Mas RMF,
- TTP data and calculation of deforestation-free volume.
- FFB supply sheds that overlap with conservation areas and peat layers are excluded from deforestation-free volume.

Control Union's responsibility was to exclusively verify the accurateness and completeness of the information as claimed by the client, Risk Management and processes for the VDF calculation of the traceability scores for the facilities included in the scope.
