### Verification methodology of Traceability to Mill:

- 30 mills were selected for sampling based on factors such as volumes provided and number of deliveries.
- Reported traceability figures by MUSIM MAS for all the facilities included in this scope and were reviewed by cross checking information for the mills selected for the sample and delivering to a specific refinery. Incoming delivery documents were reviewed and traceability score cross checked using the following formula:  $(\text{Total traceable volumes per refinery} / \text{Total purchased volumes per refinery}) \times 100$ .
- A mill was considered traceable when the following information were available: full name, parent company name, correct latitude/longitude.
- Control Union's responsibility was to exclusively verify the accurateness and completeness of the information as received by MUSIM MAS, and MUSIM MAS methodology and processes for the calculation of the traceability scores for the facilities included in the scope.
